

Diploma in  
**CHILD PSYCHOLOGY  
AND INTERVENTIONS**

# THE SCHOOL OF POSITIVE PSYCHOLOGY

Singapore | Japan | Hong Kong | Philippines

**Established in 2007**

The School of Positive Psychology is the first education and training facility in Asia dedicated to promoting the art, science, and practice of positive psychology and psychotherapy.

Alongside providing education and credentials, our focus is on promoting research, training, and the dissemination of positive psychology with the aim of sharing the gift of joy and fulfilment.

## OUR VISION

To help the world thrive through wellbeing-based education and thought leadership.

## OUR MISSION

To empower people with evidence-based, high-quality positive psychology and psychotherapy education, research, and professional development that fosters compassion and courage, and builds thriving communities, organisations, and societies.

**The Diploma in Child Psychology and Interventions is a specially curated mental health education programme designed for individuals keen to work with children. You will gain an in-depth knowledge of child and adolescent psychology, as well as foundational understanding of popular interventions for children.**

The School of Positive Psychology is under the Enhanced Registration Framework (ERF). The ERF is administered by the Committee for Private Education (CPE), a part of SkillsFuture Singapore (SSG). ERF requires all students to be covered under the Industry-Wide Course (IWC) fee insurance scheme. In The School of Positive Psychology, this is provided through Lonpac Insurance Bhd.

For more details, please visit the Committee for Private Education (CPE), a part of SkillsFuture Singapore (SSG) website: <https://www.ssg.gov.sg/cpe/pei.html>

# Diploma in Child Psychology and Interventions

The Diploma in Child Psychology and Interventions (DCPI) is a programme designed by experienced mental health professionals who specialise in working with children and youths. It provides a unique teaching method that combines both theoretical knowledge and practical application.

In addition to addressing common mental health concerns, the program teaches you how to identify children with special needs and intervene effectively to promote their growth and development towards optimal functioning and independence.

The programme covers the major stages of human growth, with a particular emphasis on children and adolescents. You will explore contemporary case studies and analyse current mental health challenges, equipping you with the skills to identify and address disorders such as attention deficit hyperactivity disorder (ADHD), depression, and anxiety as they manifest at different developmental stages.

You will also be introduced to popular therapeutic approaches for children, including Play Therapy and Art Therapy. You will learn the scientific basis for these interventions and how they enable children to interact in a therapeutic environment, fostering self-expression and problem-solving skills.

**Duration:**

12 months part-time

**Course Structure:**

4 terms per year  
(2 modules per term)

**Intakes:**

January, April, July, October

**Total Tuition Fees\*:**

S\$10,476.00 w/GST

**Note:** All course fees include prevailing 8% Goods and Services Tax (GST). Students will pay the tuition fees in instalments. The details of the breakdown will be provided in your Student Contract. Please contact us for more details.

---

## Curriculum

The DCPI programme comprises 8 modules that will enhance your understanding of children, equipping you to apply child psychology to promote children's well-being. Below are the list of modules covered in the programme:

### FOUNDATIONAL MODULES

#### PSY 01                      Foundation Psychology

How do people differ from one another? To what extent is your current behaviour shaped by your childhood development? How does motivation play a part in reaching goals? This module introduces the field of psychology as a **scientific discipline** concerned with the **study of thought and human behaviour**.

#### PSY 03                      Developmental Psychology

Developmental Psychology introduces the **study of human growth and development over the lifespan**, from conception to death. Learners will delve into the study of **major developmental stages** such as childhood, adolescence, and adulthood. Topics on puberty, sexuality, adult maturity, lifestyle changes, the family life cycle, and retirement are covered as well.

This module introduces the **fundamental theories of psychotherapy**, including psychoanalytic theories of Freud, the humanistic approach of Carl Rogers, and Choice Theory / Reality Therapy. Learners will also learn the **fundamental skills of a therapist**, and how to apply psychotherapy and counselling to help clients in areas of development and to overcome their challenges.

This module utilise a variety of art materials that encourages **self-expression to explore problems and facilitate positive change and personal growth**. The focus is not on artistic skills, but on engaging in a creative personal process that helps reconcile emotional conflicts, foster self-awareness, develop social skills, solve problems, reduce anxiety, aid in reality orientation, and increase self-esteem.

This module introduces the learners to various childhood and adolescent disorders. It explores the different disorders that these groups face, which includes depression, anxiety, obsessive-compulsive disorder (OCD), and substance abuse. Special needs such as autism spectrum disorder and attention deficit hyperactivity disorder (ADHD) will also be discussed. Learners will be taught how to **identify and differentiate between the various disorders**, which is vital in helping individuals who are suffering from them.

This module will deepen your understanding of children with special needs. **From identification to management and development**, early intervention is crucial for the growth and development of children with special needs. By understanding their challenges and implementing strategic interventions, we can help maximise their potential and improve their chances of independent living. In this module, learners will be taught **interventions** that are designed to help children with special needs learn skills that help them achieve a **higher level of personal self-sufficiency** and success in school and their community.

In this module, major theoretical views are introduced with emphasis on relevant evidence-based techniques, skills, and strategies that work well with children and adolescents in both individual and group settings. Common issues in childhood and adolescence will be highlighted with suggested intervention plans. Learners will also be taught how to establish a collaborative relationship with the stakeholders / community to design, manage, and review **evidence-based intervention plans** that better **support children and adolescents**.

In this module, learners can gain knowledge on how children learn about the world around them and how they interact with their environment through play. Aside from understanding what toys to choose and their uses in therapy work, you will also be equipped with foundation knowledge on **Child-centred Play Therapy** and learn how to **create therapeutic environments** for children to safely express themselves. The language of play is a powerful therapeutic medium to help adults understand children and how they make sense of the world. Play therapy is an evidence-based clinical therapy that has been shown to help children and adolescents in many areas.
